I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investments in mutual fund units involves investment risks such as market risk, credit & default risk, liquidity risk, trading volumes, settlement risk, including the possible loss of principal.
- As the price/ value/ interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down. The various factors which impact the value of the scheme's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- Past performance of the Sponsor/ AMC/ Mutual Fund does not guarantee future performance of the scheme.
- BNP Paribas Fixed Term Fund– Series 30A and 30B is the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor / associates are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 1,00,000 (Rupees One lakh only) to the corpus of the Mutual Fund made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors:

– **Market Risk:**
All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme's objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.
Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The scheme may be subject to price volatility due to factors such as interest sensitivity, market perception, and creditworthiness of issuer and market liquidity.
Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

– **Risks associated with investing in equities.**
The Scheme will not invest in equity and equity related instruments.

– **Risks associated with investing in fixed income securities:**

(a) **Credit and Counterparty risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).
Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments or the conclusion of financial derivatives contracts.
The value of a fixed income security and OTC derivatives will fluctuate depending upon the changes in the perceived level of credit and counterparty risk as well as any actual event of default.
If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities or OTC derivatives in which the scheme has invested to fall.
The severity of the risk varies depending on the quality of the securities and derivatives in the scheme. To the extent that the scheme invests in high-yield bonds, this presents a higher than average risk. There are different types of debentures available in the market. Some of them could be more risky. Lower-quality debt securities and certain types of securities involve greater risk of default or price changes due to changes in the credit quality of the issuer. They are not in the first rank of debts in case of default. The value of lower-quality debt securities and certain types of other securities can be more

volatile due to increased sensitivity to adverse issuer, political, regulatory, market or economic developments.

(b) Liquidity Risk: The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the Fund invests.

A lower level of liquidity affecting an individual security or derivative or an entire market at the same time, may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities and derivatives quickly enough to minimise impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme.

The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

Treatment and disposal of illiquid securities/NPAs at the time of closure of the Scheme: Such securities will be valued in good faith in accordance with the Valuation Policy. Further SEBI Regulations / provisions (vide SEBI Circular - MFD/CIR/05/432/2002 dated June 20, 2002) shall apply for such securities. Accordingly any amount realized by the mutual fund after the winding up of the schemes from such NPAs and illiquid securities, if substantial and realized within two years shall be distributed back to the investors. In case the amount is not substantial or it is realized after two years, it may be transferred to the Investor Education Fund maintained as specified in SEBI circular MFD/CIR/9/120/2000 dated November 24, 2000. The decision as to the determination of substantial amount shall be taken by the Trustees of Mutual Fund after considering the relevant factors

(c) Interest Rate Risk & Re-investment Risk: The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

The value of debt and fixed income securities held by the scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa.

Securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

The investments made by the scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the scheme are not invested and no return is earned thereon

(d) Concentration Risk: The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

(e) Sovereign risk: The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

- **Risks associated with investing in Foreign Securities:**
  The Scheme will not invest in Foreign Securities.

Std Obs 3

- **Risk associated with derivatives:**
  The Scheme will not invest in derivative instruments

Std Obs 5

- **Risks associated with investing in securitised debt:**
  The Scheme will not invest in securitised debt.

Std Obs 4

- **Risks associated with Short selling and Securities Lending**
  The Scheme will not indulge in Short selling and Securities Lending.

- **Risks associated with investing in liquid funds:**
  To the extent of the investments in liquid mutual funds, the risks associated with investing in liquid funds like market risk, credit & default risk, liquidity risk, redemption risk including the possible loss of principal; etc. will exist.

- **Risks associated with investing in Close ended Schemes:** The Scheme being close ended in nature does not allow redemption during the tenure of the scheme. Redemptions shall happen only at the time of maturity of the scheme, and hence returns generated by the scheme may be affected if the underlying markets are at unfavourable level at the time of maturity of the scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so by selling their units through stock exchange. For the Units listed on the exchange, it is possible that the market price at which the Units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the NAV returns.

- **Risks associated with Listing of Schemes:**

• Listing of the units of the scheme does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the scheme may quote below its face value / NAV.
• Trading in the units of the Scheme on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged.
• There is a possibility that the unitholders find it difficult or uneconomical to liquidate their investments at any particular time. As a result, investors in the scheme must be prepared to hold the units until the maturity under the Scheme
• As the units of the scheme may be held in electronic (demat) mode through depositories, the record of the depository shall be final with respect to the number of units available to the credit of unitholder. Settlement of trades, redemption/dividend payment, in lieu of such units held in electronic (demat) form, by the Mutual Fund will depend upon the confirmations to be received from depository (ies) on which the Mutual Fund has no control.

- **Other Risks:**

• **Risk associated with inflation:** Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.
• **Legal risk:** The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.

- **Taxation risk:** The value of an investment may be affected by the application of tax laws, including withholding tax, or changes in government or economic or monetary policy from time to time. As such, no guarantee can be given that the financial objectives will actually be achieved. The tax information described in this SID is as available under the prevailing taxation laws. This could be changed at any moment by regulation. Further, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the scheme will endure indefinitely.
- **Valuation risk:** This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.
- **Operational Risk:** Operational risk addresses the risk of trading and back office or administration issues that may result in a loss to the scheme. This could be the result of oversight, ineffective securities processing procedures, computer systems problems or human error. There could also be risk associated with grouping of orders. For instance, at the time of placing the trades, the fund manager shall group orders on behalf of all schemes managed by him, provided it is unlikely to be detrimental overall for any of the schemes whose orders have been included. However, such grouping may have a detrimental effect to the scheme compared to the execution of an individual order for the scheme.
- **Risk factors associated with processing of transaction in case of investors investing in mutual fund units through Stock Exchange Mechanism:** The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognized stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing / settlement, etc. upon which the Fund and the AMC have no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s) upon which the Fund and the AMC have no control. Accordingly, there could be negative impacts to the investors such as delay or failure in allotment / redemption of Units. The Fund and the AMC are not responsible for the negative impacts.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme and each Series under the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). These conditions will be complied with immediately after the close of NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan(s) under the Scheme shall be wound up in accordance with Regulation 39(2) (c) of SEBI (MF) regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the date of closure of the New Fund Offer.

C. SPECIAL CONSIDERATIONS

- From time to time, the Sponsor, their affiliates, associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Scheme. These entities may acquire a substantial portion of the Scheme's Units and collectively constitute a major investor in the Scheme.

Asset Allocation proportions may vary substantially depending upon the perception of the AMC the intention being at all times to seek to protect the interests of the unit holders. Such changes in the investment pattern will be for short term and only for defensive considerations. In addition, as part of the investment process, the Investment Committee of the AMC will conduct a periodic review of the asset allocation and may suggest rebalancing of the portfolio.

OTHER DISCLOSURES FOR CLOSE ENDED DEBT ORIENTED SCHEMES:

I. Credit evaluation policy for the investments in debt securities

II. List of sectors where the Scheme will not be investing

CDs

Notes:
1. Securities with rating A and AA shall include A+ and A- & AA+ and AA- respectively. Similarly, securities with A1 shall include A1+.
2. All investment shall be made based on the rating prevalent at the time of investment. However, in case of an instrument having dual ratings, the most conservative publicly available rating would be considered for the purpose of meeting the intended range as above.
3. There can be positive variation in the range in investment towards higher credit rating in the same instrument.
4. In case of non-availability of and taking into account the risk-reward analysis of CPs/ NCDs; the Scheme may invest in CBLOs, and CDs having highest credit rating (i.e. A1+ or equivalent) or or instruments issued with sovereign ratings (eg. G-sec/ SDLs/T-Bills etc.). Such deviation may continue till maturity of Scheme, if suitable CPs/NCDs of desired credit quality is not available.

7. In the event of any deviations from the floor and ceiling of credit ratings specified for any instrument, other than by reason of downgrade or default and notes mentioned herein, the AMC will seek to rebalance the portfolio as follows:
   - For the scheme tenure upto 1 month, the portfolio need not be rebalanced, as there will not be any variation

   There will not be any variation between the intended portfolio allocation and the final portfolio allocation except as stated in points 3, 4, 5, 6 & 7 above
8. The Scheme shall not invest in unrated debt securities. For this purpose, unrated debt securities shall exclude instruments such as CBLO, Reverse Repo, short term deposit and such similar instruments to which rating is not applicable.

V. Reporting:

After the closure of NFO, the AMC will report in the next meeting of AMC/ Trustees, the publicized percentage allocation and the final portfolio.

D. WHERE WILL THE SCHEME INVEST?

Std Obs 15

The corpus of the Scheme will be primarily invested in any debt instrument, which is rated as investment grade by any rating agency like CRISIL, ICRA, FITCH, etc. and money market instruments aiming to reduce interest rate risk of the scheme. The actual percentage of investment in various fixed income securities will be decided after considering various factors such as the prevailing inflation and interest rate scenario, performance of corporate sector, general liquidity and other considerations. Subject to SEBI Regulations and other prevailing laws as applicable, the net assets of the Scheme can be invested in any (but not exclusively) of the following securities.

1. Debt & money market instruments including bonds, debentures, treasury bills, commercial paper of public sector undertakings and private sector corporate entities, reverse repurchase obligation in government securities and treasury bills (the Scheme will not invest in reverse repurchase agreement in corporate debt securities), certificate of deposit of scheduled commercial banks and development financial institutions, bills of exchange / promissory notes of corporate entities, government securities etc. as may be permitted by SEBI / RBI.
2. Debt Securities of the Government of India, state and local governments, government agencies, statutory bodies, public sector undertakings, scheduled commercial banks, non-banking finance companies, development financial institutions, corporate entities & trusts.
3. Any other like instruments including units of mutual funds as may be permitted by RBI / SEBI / such other regulatory authority from time to time.

In terms of SEBI circulars (reference no. SEBI/IMD/CIR No. 1/ 91171/07 dated April 16, 2007, SEBI/IMD/CIR No. 8/107311/07 dated October 26, 2007 and SEBI/IMD/CIR No. 7/129592/08 dated June 23, 2008), pending deployment of funds of the Scheme in securities in terms of investment objective of the Scheme, the Mutual Fund may invest the funds of the Scheme in short term deposits of scheduled commercial banks subject to restrictions laid down under the SEBI Regulations from time to time.

The securities mentioned above and such other securities that the Scheme is permitted to invest in could be listed, unlisted, privately placed, secured, unsecured, rated and of any maturity. The securities may be acquired through initial public offerings (IPOs), follow on offers, secondary market operations and private placement, rights offers or negotiated deals.

For applicable regulatory investment limits please refer to the paragraphs under the Section "What are the Investment Restrictions?" further in this document.

E. WHAT ARE THE INVESTMENT STRATEGIES?

Std Obs 7

The investment strategy seeks to generate superior risk-adjusted returns on a consistent basis through a research driven investment approach in line with the investment objective of the scheme. The investment manager aims to allocate assets of the scheme between various money market and fixed income securities. The actual percentage of investment in various fixed income securities will be decided after considering various factors like the prevailing interest rate and inflation scenario, performance of corporate sector, general liquidity and other considerations.
The AMC aims to identify securities which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, analysis of macroeconomic fundamentals such as growth, inflation, exchange rates, liquidity, etc. along with an in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.

Being a fixed term fund, under normal circumstances, the need to rebalance will be minimal once the initial investments have been made.

Risk Control Strategies
Since investing requires disciplined risk management, the AMC would endeavour to incorporate adequate safeguards for controlling risks in the portfolio construction process. A credit evaluation of each investment opportunity will be undertaken to manage credit risk. The AMC will utilise ratings of recognised rating agencies as an input in the decision making process. The fund manager shall follow the asset allocation pattern in SID under normal circumstances and excess cash (if any) generated by way of coupon receipts etc. may be invested in the collateralised borrowing & lending obligations (CBLO) / repo market, units of liquid funds. There can however be no guarantee against liquidity risk within the Scheme.

The AMC may also implement certain internal control procedures / risk & exposure limits etc. for controlling risks which may be varied from time to time.

The above risk control measures shall be implemented by the AMC on best effort basis however there can be no guarantee that such measures can completely mitigate the risks involved in Scheme.

Portfolio turnover
Portfolio turnover is defined as lesser of purchases and sales as a percentage of the average corpus of the scheme during a specified period of time. Portfolio turnover would depend upon the market conditions such as volatility of the market and inflows/outflows in the scheme. The scheme has no explicit constraints either to maintain or limit the portfolio turnover. It is expected that the portfolio turnover will be low since the scheme is a close ended scheme.

Position of debt & money market in India

Std Obs 12

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The G-Sec market is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Sec market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Collateralised Borrowing & Lending Obligations (CBLO)
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as money market instruments, PSU / DFI / corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option. The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

F. FUNDAMENTAL ATTRIBUTES

Std Obs 8

Following are the fundamental attributes of the Scheme, in terms of Regulation 18(15A) of the SEBI (Mutual Funds) Regulations, 1996:

(i) Type of the Scheme - As stated in Section II-A.
(ii) Investment Objective -
- Main Objective –As stated in Section II-B of the SID.
- Investment Pattern - As stated in Section II-C of the SID.

(iii) Terms of Issue
- Liquidity provisions such as listing, repurchase, redemption as indicated in this Scheme Information Document.
- Aggregate fees and expenses charged to the Scheme as indicated in this Scheme Information Document.
- The Scheme does not guarantee any assured returns.

In accordance with Regulation 18(15A) of the SEBI (MF) Regulations, the Trustees shall ensure that no change in the fundamental attributes of the Scheme or the trust or fee and expenses payable or any other change which would modify the Scheme and affect the interests of unit holders is carried out unless:

(i) A written communication about the proposed change is sent to each unit holder and an advertisement is given in one English daily newspaper having nationwide circulation as well as in a newspaper published in the language of the region where the Head Office of the Mutual Fund is situated; and
(ii) The unit holders are given an option for a period of 30 days to exit at the prevailing Net Asset Value without any exit load.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Std Obs 9

The benchmark indices for the Scheme shall be follows:
CRISIL Liquid Fund Index (for schemes launched with tenure of upto 91 days)
CRISIL Short Term Bond Fund Index (for schemes with tenure of 92 days to 36 months)
CRISIL Composite Bond Fund Index (for schemes with tenure of more than 36 months to 60 months)
The Tenure of the scheme would be determined and disclosed at the time of filing of Final Scheme Information Document with SEBI before launch of each scheme.
The performance comparison for the Scheme will be made vis-à-vis the respective benchmarks. However, the Scheme's performance may not be strictly comparable with the performance of the respective benchmarks due to the inherent differences in the construction of the portfolios. The Trustee / AMC reserve the right to change the benchmarks for evaluation of performance of the Scheme from time to time in conformity with the investment objective and appropriateness of the benchmarks subject to the SEBI Regulations, and other prevailing guidelines, if any.

Rationale for adoption of benchmark:
CRISIL Liquid Fund Index (for schemes launched with tenure of upto 91 days) is designed to track the returns on a portfolio that includes call instruments, certificate of deposits & commercial paper instruments. Therefore in our opinion, CRISIL Liquid Fund Index is a convenient, appropriate and easily available tool for analysing and capturing market movements and for determining the corresponding effect on a portfolio consisting of abovementioned instruments.

CRISIL Short Term Bond Fund Index (for schemes with tenure of 92 days to 36 months) is an index to track the return on a Short-Term Portfolio that includes certificate of deposits, commercial paper, Government securities as also the AAA and AA rated instruments. Therefore, in our opinion, CRISIL Short Term Bond Fund Index is a convenient, appropriate and easily available tool for analysis and capture of market movements and for determining the corresponding effect on a portfolio consisting of the above-mentioned instruments.

CRISIL Composite Bond Fund Index (for schemes with tenure of more than 36 months to 60 months) is an index to track return on a Composite Portfolio that includes Government Securities as also the AAA and AA rated instruments. Therefore, in our opinion, CRISIL Composite Bond Fund Index is a convenient, appropriate and easily available tool for analysis and capture of market movements and for determining the corresponding effect on a portfolio consisting of the above-mentioned instruments.
